Hi,

Here's my evaluation in the format given by the TAs.

Team No: 12

Project Name: Identification and analysis of Instagram posts involving sexist stereotyping

Feedback on Scope Document:

Despite making it explicit that the data is to be obtained from Instagram, the document mentions "any other social media platform". Please avoid this in the future.

"Multi-label or single-label classification" without anything accompanying it, I am afraid, does not offer much. The team was expected to explore this choice and offer some insights (and optionally make a decision).

"If labeled data set is not available for 2 or 3" - The expectation here was some comments/analysis as to whether labeled data is needed, how to obtain it, what can be done in the absence of labled data, etc.

While some details are mentioned about crawling posts from Instagram, it is not clear how relevant posts will be obtained.

Points out of 20: 15

Thanks,

Pulkit
